

# THE ANALYST PRO

## EVALUATION | DIAGNOSTICS | SYSTEM PERFORMANCE

### Are you optimizing the value of your equipment?

Maximize the value of your equipment with The Analyst Pro. The Analyst Pro evaluates total system performance through multi-point measurements of flow, temperature and pressure by taking actual readings not only at the proportioner, but near the gun. As a diagnostic tool, The Analyst Pro only takes one to two weeks to fully evaluate your system. Use it for a couple of weeks, and then return it.

- Adapts to most industry standard proportioners
- Realtime readings analyze flow, temperature and pressure throughout the entire system from proportioner to hose to gun

Your sprayfoam rig is a significant investment. Analyzing flow, temperature and pressure ensures that you are optimizing your yield which results in lower chemical costs and higher margins.

**THE ANALYST PRO**

**Evaluate real-time flow, temperature and pressure**

**Analyze system performance in 1 - 2 weeks**

**Adapts to most industry standard proportioners**

**Easy-to-understand data visualizations**

**Historical data export**
